

Summary of the 5/5/2016 PACE-IOP teleconference.

Present: Lorraine R., Cecil R., Watson G., Susanne C., Stephane M., Greg M.

Several people notified me they could not attend due to the NASA due to their participation in Biodiversity and Ecological Forecasting Team meeting. Hence the meeting was short (11min).

Written in the order of the discussion.

1. Updates from OCRT

2. Report from subgroups.

Nothing to report.

3. AC-team (Lorraine R.): Sent an outline of AC part of final report but to date received no comments. Robert is proposing a paper on AC using hyper-spectral radiometry and polarimetry – what has been done and propose an approach for PACE.

Kirk K. moved to Goddard – with Lorraine looking for available datasets to test proto-algorithms for AC for PACE.

4. Ocean Optics, 2016 – please make plans to arrive to Victoria sufficiently early so we can get together on Sunday, October 23rd. We will provide submit individual projects power-points + sound (as did Mike T. and Steve A. for the past two ST meetings) a week prior to the meeting for all to see and use the one day to work on team goals (subgroups, and group discussions and draft of paper).

We got the venue.

Next teleconference: 06/02/2016 at 12:15 EDT
