- MODIS-Terra
- VIIRS
- Link settings between sensors (when possible)

About

MODIS-Aqua

MODIS-Terra

A subscription consists of a defined region for which data are made available as they are processed. There are two types of subscriptions that can be made, Data and Mapped Images.

Data Files

This option is made available for investigators who desire to receive all future data collected over a region. The subscription does not provide archived (i.e. previously collected) data. For archived data, please use the Level 1 and 2 Browser.

Extracted vs. Non-extracted Data

For data types that support extraction, your subscription can be extracted to your region of interest. For Level 2 extracted subscriptions, the data are processed from level 1 extracts and include the standard ocean color products and sea surface temperature (if the sensor supports it). Currently, extracted data are limited to daytime granules. Non-extracted subscriptions can be made for daytime ocean color and sst, as well as nighttime sst data. Non-extracted subscriptions can be set to wait for refined processing (i.e. until all ancillary data required for processing have been acquired)

Mapped Images

The near real-time (NRT) image utility allows users to requests for PNG formatted mapped images.

Defining a Region

You may choose the region for your subscription from a list of pre-defined regions, or define a custom region. Pre-defined regions are fixed, and cannot be edited by users. User defined regions are only usable/editable by the user who created them.
